Abstract

The complete Business Entities (BE) directory: legal and functional entities, corporations, ownership and control, partnerships, private limited companies, sole proprietorships, trusts, government entities and regional reference individuals.

Status of This Document

Unofficial GraphArch documentation preview of all 48 BE RDF/XML ontologies from EDM Council FIBO commit 33a92cd34285d532c158da97bb42add089f135d3. This includes domain and module metadata, aggregation ontologies and regional individuals. The 43 imports outside BE (FIBO Foundations, OMG Commons and LCC) remain external references; no implicit import closure or reasoning is performed. This is not the whole FIBO ontology or an adopted replacement specification. Original license notices and immutable source URLs with content digests are retained.

The FIBO Business Entities (BE) Domain covers defines business concepts that are used for data governance, interoperability, and in regulatory reporting about business entities.

The scope of the BE domain includes business and legal entity concepts that are considered by financial industry firms, regulators and other industry participants relevant to financial services and more broadly, including:

- Legal entities generally
- Corporate structure, ownership and control, including primary executive roles for businesses,
- Functional entities such as governments and government entities, non-governmental organizations, international organizations, not-for-profit organization, etc.
- Concepts specific to corporations, partnerships, private limited companies, sole proprietorships, and trusts.

2.1.1 Functional Entities Ontology

2.1.1.1 Overview

Functional Entities Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/FunctionalEntities/FunctionalEntities/`
Prefix	`fibo-be-fct-fct`

This ontology defines the fundamental concepts for entities defined by their function, such as the relationship to the various forms which one or another functionally-defined entity may take. It also includes a number of basic types of entity defined by function, such as business and non-profit. The concepts in this ontology are intended to be extensible in other ontologies which may be dedicated to specific kinds of functionally-defined business entity or organization.

2.1.1.2 Classes

2.1.1.2.1 association

not-for-profit organization that is owned by and acts on behalf of its members

https://www.omg.org/spec/Commons/AnnotationVocabulary/adaptedFrom	ISO 18245:2003 Retail financial services - Merchant category codes
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Merchant categories are organized by the type of business, trade or services supplied. Certain category codes including those for very large businesses, such as airlines and some hotel chains, may be delineated to the point of identifying the business. Merchant category codes and/or the descriptions of the service categories are frequently used in credit card and other banking transactions for analysis, transaction classification, such as for use in promotional rewards, and sometimes tax-related purposes.
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Values are specified only for those merchant categories that are generally expected to originate retail financial transactions. Criteria for establishing a new category code includes (a) the merchant category is reasonable and substantially different from all other merchant categories currently represented in the list of code values; (b) the merchant category is separate and distinct from all other industries currently represented in the list of code values; (c) the proposal describes a merchant category or industry, and not a process; (d) the minimum annual sales volume of merchants included in the merchant category, taken as a whole, is USD 10 million; and (e) sufficient justification for the addition of a new code value is found.

2.1.2 Publishers Ontology

2.1.2.1 Overview

Publishers Ontology

Identifier	Value
Ontology IRI / Namespace	https://spec.edmcouncil.org/fibo/ontology/BE/FunctionalEntities/Publishers/
Prefix	fibo-be-fct-pub

The concept of a publisher is central to the notion of a data provider in financial markets. This ontology defines the fundamental concepts for publishers of information, including entities whose primary function is to publish, and those (whether or not they are publishers in that sense) that play the role of the publisher of some information.

2.1.2.2 Classes

2.1.2.2.1 API-first market data provider

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Canada's federal structure divides government responsibilities between the federal government and the ten provinces. Provincial legislatures are unicameral and operate in parliamentary fashion similar to the House of Commons. Canada's three territories also have legislatures, but these are not sovereign and have fewer constitutional responsibilities than the provinces. The territorial legislatures also differ structurally from their provincial counterparts.

2.2.8 Government Entities Ontology

2.2.8.1 Overview

Government Entities Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/GovernmentEntities/GovernmentEntities/`
Prefix	`fibo-be-ge-ge`

This ontology defines the fundamental concepts for representing polities and government entities and their relations.

2.2.8.2 Classes

2.2.8.2.1 branch of government

division of the government of a state, with separate and independent powers and areas of responsibility so that the powers of one branch are not in conflict with the powers associated with the other branches

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	A federation is a political entity characterized by a union of partially self-governing states or regions under a central (federal) government. In a federation, the self-governing status of the component states, as well as the division of power between them and the central government, are typically constitutionally entrenched and may not be altered by a unilateral decision of either party, the states or the federal political body.

owl:disjointWith	fibo-be-ge-ge:Instrumentality
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	In the Commonwealth of Nations, the word government is also used more narrowly to refer to the collective group of people that exercises executive authority in a state. This usage is analogous to what is called an 'administration' in American English. Furthermore, especially in American English, the concepts of the state and the government may be used synonymously to refer to the person or group of people exercising authority over a politically organized territory.

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	There is a notable variety of agency types. Although usage differs, a government agency is normally distinct both from a department or ministry, and other types of public body established by government. The functions of an agency are normally executive in character, since different types of organizations (such as commissions) are most often constituted in an advisory role; this distinction is often blurred in practice however.

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	An instrumentality is a non-governmental agency that acts independently but whose obligations are backed by a government because of its role in providing a public service. Many instrumentalities are private companies, and some are chartered directly by government. Instrumentalities are subject to a unique set of laws that shape their activities. Certain organizations, such as Sallie Mae in the United States, may be considered instrumentalities from some perspectives but not others. Sallie Mae's status was changed in 2004, when it was privatized, and since that time it is no longer considered a government-sponsored enterprise (GSE).

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Article One, Section Eight of the United States Constitution grants the U.S. Congress 'exclusive jurisdiction' over the city. The District did not have an elected local government until the passage of the 1973 Home Rule Act. The Act devolved certain Congressional powers to an elected mayor and the thirteen-member Council of the District of Columbia. However, Congress retains the right to review and overturn laws created by the council and intervene in local affairs. Jurisdiction is shared among numerous federal agencies, the attorney general for the District, and Congress today. Actions requiring litigation in court may be addressed in the District of Columbia Superior Court or Court of Appeals, or in Federal Court, depending on the issue.

The legal entities module contains ontologies that extend the basis for legal personhood and business entities established in the OMG's Commons Ontology Library. This includes (1) definitions that distinguish between judicial and natural person, (2) definitions of formally constituted organizations, their members and high-level subdivisions, and identification and classification schemes, (3) definitions of corporate entities and the ways in which they may be incorporated, and (4) definitions required for implementation and use of the ISO 17442 Legal Entity Identifier (LEI) standard.

2.3.1 Corporate Bodies Ontology

2.3.1.1 Overview

Corporate Bodies Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/LegalEntities/CorporateBodies/`
Prefix	`fibo-be-le-cb`

This ontology defines the basic constructs for corporate bodies, including for-profit as well as not-for-profit corporations, and includes fundamental concepts for companies incorporated through the issuance of shares.

2.3.1.2 Classes

2.3.1.2.1 benefit corporation

not-for-profit corporation set up under specific state legislation, typically to provide some social benefit, without an obligation to maximize shareholder return

	public, unlike those of public limited companies. Limited by shares means that the company has shareholders, and that the liability of the shareholders to creditors of the company is limited to the capital originally invested, i.e. the nominal value of the shares and any premium paid in return for the issue of the shares by the company. A shareholders personal assets are thereby protected in the event of the company's insolvency, but money invested in the company will be lost. A limited company may be private or public. A private limited companys disclosure requirements are lighter, but for this reason its shares may not be offered to the general public (and therefore cannot be traded on a public stock exchange). This is the major distinguishing feature between a private limited company and a public limited company. Most companies, particularly small companies, are private. Private companies limited by shares are required to have the suffix Limited (often written Ltd or Ltd.) or Incorporated (Inc.) as part of their name, though the latter cannot be used in the UK or the Republic of Ireland. In the Republic of Ireland, Teoranta (Teo.) may be used instead, largely by Gaeltacht companies. Cyfyngedig (Cyf.) may be used by Welsh companies in a similar fashion.

2.3.2 Formal Business Organizations Ontology

2.3.2.1 Overview

Formal Business Organizations Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/LegalEntities/FormalBusinessOrganizations/`
Prefix	`fibo-be-le-fbo`

This ontology defines formal business organizations and related concepts. The ontology covers parts of organizations, membership, classification, address relations and other properties which are applicable to formal business organizations generally. The concept of a formal business organization forms the basis for articulation of types of organization, both incorporated and non-incorporated, in other FIBO-BE ontologies.

2.3.2.2 Classes

Member-serving organizations include mutual societies, cooperatives, trade unions, credit unions, industry associations, sports clubs, retired serviceman's clubs and other organizations that benefit a particular group of people - the members of the organization. Typically, community-serving organizations are focused on providing services to the community in general, either globally or locally: organizations delivering human services programs or projects, aid and development programs, medical research, education and health services, and so on.

2.3.3 Legal Entity Identifier (LEI) Entities Ontology

2.3.3.1 Overview

Legal Entity Identifier (LEI) Entities Ontology

Identifier	Value
Ontology IRI / Namespace	https://spec.edmcouncil.org/fibo/ontology/BE/LegalEntities/LEIEntities/
Prefix	fibo-be-le-lei

This ontology defines concepts around contractually capable business entities. The terms defined here are those which are relevant to the Legal Entity Identifier (LEI) work. The term known as legal entity in that work is identified as a formal organization which is recognized in some jurisdiction as being capable of incurring some liability, whether or not is a legal person as understood by the legal community. This is labeled as contractually capable entity, to avoid confusion with the accepted legal term for Legal Entity. Such entities are recognized as requiring an LEI, but the identifier itself is allocated to the formal organization which is recognized as being contractually capable.

The ownership and control module contains ontologies that define various types and aspects of ownership and control as they apply among and between business entities. The ontologies in this module include the definition of types of party as defined in the roles of ownership and control along with the capacities which define those parties, and separately the relationships of ownership and control directly between organizations, which arise from the existence of those roles. Specific types of ownership and control relationships that are unique to incorporated companies are defined in addition to the more general terms to which these relate. Also included is an ontology of the types of control relationships that exist by virtue of the powers conferred upon corporate officers, board members and other executive roles.

2.4.1 Control Parties Ontology

2.4.1.1 Overview

Control Parties Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/OwnershipAndControl/ControlParties/`
Prefix	`fibo-be-oac-cpty`

This ontology defines concepts relating to types of controlling parties. The concepts defined here are party in role concepts, which define the nature of some entity such as an organization or a legal person, in some role such as that of owning a controlling interest in the entity or of controlling that entity. These roles are defined in terms of the types of control enjoyed by the party, for example de facto or de jure control. An important feature of this ontology is the distinction between the holding of a controlling interest (such as voting shares), and the de facto existence of control of one body by another as asserted in company filings or as a conclusion drawn from computational analysis of controlling interests.

Corporate Control Ontology

Identifier	Value
Ontology IRI / Namespace	https://spec.edmcouncil.org/fibo/ontology/BE/OwnershipAndControl/CorporateControl/
Prefix	fibo-be-oac-cctl

This ontology defines concepts relating to corporation-specific control. These concepts are based on the general types of control (both de facto control and controlling interests), as defined in the ControlParties ontology, and are the specific examples of these concepts as they apply to companies incorporated by the issuance of shares.

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	From World Bank Report: In identifying the beneficial owner, the focus should be on two factors: the control exercised and the benefit derived. Control of a corporate vehicle will always depend on context, as control can be exercised in many different ways, including through ownership, contractually or informally.
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	The Financial Action Task Force on Money Laundering (FATF) refers to a 'beneficial owner' as the natural person(s) who ultimately owns or controls a legal entity and/or the natural person on whose behalf a transaction is being conducted. It also includes those persons who exercise ultimate effective control over a legal person or arrangement.
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	The National Credit Union Administration (NCUA) defines a 'beneficial owner' as (1) a single individual with significant responsibility to control, manage or direct a legal entity customer, or (2) each individual, if any, who, directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise, owns 25 percent or more of the equity interests of a legal entity customer; if a trust owns directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise, 25 percent or more of the equity interests of a legal entity customer, the beneficial owner is the trustee.
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Use of a nominee (who may be an agent, custodian, or a trustee) does not change the position regarding tax reporting and tax liability, and the beneficial owner remains responsible.

2.4.4.1 Overview

Executives Ontology

Identifier	Value
Ontology IRI / Namespace	https://spec.edmcouncil.org/fibo/ontology/BE/OwnershipAndControl/Executives/
Prefix	fibo-be-oac-exec

This ontology defines concepts relating to executives and their formal capacities. The concepts defined in this ontology cover types of corporate officers, board members and the like, along with the capacities in terms of which those party roles are defined, and the kinds of entity (principally natural persons) that are able to perform in those roles.

In large institutions, corporate officers may include loan/lending officers, those in certain supervisory roles, and others with varying degrees of authority, and frequently they are given a 'vice president' title, particularly if they are customer facing. Hiring and other decisions related to such corporate officers may be delegated to more operational levels, rather than by the board directly, with respect to such personnel.

2.4.5 Ownership Parties Ontology

2.4.5.1 Overview

Ownership Parties Ontology

Identifier	Value
Ontology IRI / Namespace	https://spec.edmcouncil.org/fibo/ontology/BE/OwnershipAndControl/OwnershipParties/
Prefix	fibo-be-oac-opty

This ontology defines concepts relating to types of organization owning parties. The concepts defined here are party in role concepts, which define the nature of some entity such as an organization or a legal person, in some role such as that of owning equity in the entity. These roles are defined in terms of the ownership enjoyed by the party, with distinctions between constitutional ownership i.e. ownership defined in terms of stockholder equity, and investment ownership more generally.

2.4.5.2 Classes

2.4.5.2.1 constitutional owner

entity owner that holds an equity stake in said entity, in the form of shareholders' equity

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	Typically this would be share ownership or the holding of partnership equity. Ownership in this 'constitutional' sense means that the owner is in some way a member of the organization, such as an employee or director, as distinct from some outside investor.

The partnerships module contains ontologies that define concepts relating to types of partnerships, including incorporated and non-incorporated organizations. Partnerships are defined without reference to jurisdiction-specific legal forms. The abstractions distinguish between types of partnerships and related formation characteristics, as well as kinds of partners and types of partnership equity.

2.5.1 Partnerships Ontology

2.5.1.1 Overview

Partnerships Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/Partnerships/Partnerships/`
Prefix	`fibo-be-ptr-ptr`

This ontology defines partnerships and related concepts. The concepts distinguish general from limited partners, as well as the types of equity that they hold. Included are abstract definitions of partnership types based on whether they have general, limited or both kinds of partners. Both legally incorporated and non incorporated forms of partnerships are covered.

2.5.1.2 Classes

2.5.1.2.1 general partner

partner and part-owner that is responsible for managing the day to day operations of the partnership and that may be jointly and severally liable for the obligations of the partnership

`fibo-be-ptr-ptr:GeneralPartner`

rdfs:subClassOf	fibo-be-ptr-ptr:LimitedPartnership
https://www.omg.org/spec/Commons/AnnotationVocabulary/abbreviation	LLLP
https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	The primary difference between an LLLP and more traditional limited partnership is that an LLLP allows liability transfer from the general partner's (to external insurer) for debts and obligations of the limited partnership. Typically, general partners manage the LLLP, while the limited partners' interest is primarily for investment purposes.

https://www.omg.org/spec/Commons/AnnotationVocabulary/explanatoryNote	A private company with limited liability, although a business entity, is not a corporation. The primary characteristic this legal form shares with a corporation is limited liability, and the primary characteristic it shares with a partnership is the availability of pass-through income taxation. It is often more flexible than a corporation, and it is well-suited for companies with a single owner.

2.8.1 Trusts Ontology

2.8.1.1 Overview

Trusts Ontology

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/Trusts/Trusts/`
Prefix	`fibo-be-tr-tr`

This ontology defines the fundamental common terms for trusts. Trusts are entities set up in terms of the applicable local statutes goerning trusts, and have as a minimum three specific, defined parties, known in many jurisdictions as trustor (sometimes sponsor), trustee and beneficiary. The terms in this ontology may be extended as necessary to represent specific types of trust, for example in the funds arena.

2.8.1.2 Classes

2.8.1.2.1 irrevocable trust

trust that cannot be modified, amended or terminated except under certain legal circumstances and typically not without the permission of the grantor's named beneficiary or beneficiaries

10 Metadata about the EDMC-FIBO Business Entities (BE) Ownership and Control Module

10.1 Overview

Metadata about the EDMC-FIBO Business Entities (BE) Ownership and Control Module

Identifier	Value
Ontology IRI / Namespace	`https://spec.edmcouncil.org/fibo/ontology/BE/OwnershipAndControl/MetadataBEOwnershipAndControl/`
Prefix	`fibo-be-oac-mod`

The ownership and control module contains ontologies that define various types and aspects of ownership and control as they apply among and between business entities. The ontologies in this module include the definition of types of party as defined in the roles of ownership and control along with the capacities which define those parties, and separately the relationships of ownership and control directly between organizations, which arise from the existence of those roles. Specific types of ownership and control relationships that are unique to incorporated companies are defined in addition to the more general terms to which these relate. Also included is an ontology of the types of control relationships that exist by virtue of the powers conferred upon corporate officers, board members and other executive roles.

Diagram interpretation

Class diagrams use UML shorthand for asserted OWL facts and declared SHACL constraints, without inference or a claim that validation passed. RDF properties remain independent resources even when drawn as class members or labelled associations. Domain/range declarations alone do not impose requiredness or cardinality. A property with a declared domain and range is a labelled association from the domain to the range; a datatype property, or one without a specific range, is an attribute of its domain. Multiple domains or ranges apply conjunctively, not as alternatives: each declared domain-range pair is drawn and holds for every use of the property. An explicitly declared union domain is drawn as one source box whose class alternatives are joined by or. A dotted rdfs:Resource source box is a presentation placeholder when no specific domain is declared in the selected inputs, not an asserted domain or a claim that none can be entailed. OWL class restrictions on the documented class and on neighbouring classes use UML notation instead of expression boxes, scoped to the restricted class and never declaring a global range or count. A datatype restriction is an attribute, name : type [multiplicity]; an object restriction is an association to its filler class with the multiplicity at the target end (a neighbouring class shows it as a typed attribute instead). An unqualified count uses the declared property range. someValuesFrom gives 1..* {qualified}; allValuesFrom gives * {all values}, narrowing the value type; a qualified count counts only values in the named filler and adds {qualified}; hasValue adds {= value}. Multiplicities follow one convention: equal bounds show one number such as 1, an unconstrained range shows *, and otherwise lower..upper such as 0..1 or 1..*. A maximum or exact count of zero, in OWL or SHACL, is a prohibition rather than a multiplicity: it appears as a class constraint row after the attributes, {no p}, or {no p in C} when only values in C are excluded. A zero minimum imposes no restriction and is omitted. {redefines} marks a restriction on a property whose declared domain is an asserted superclass, redefining the inherited property of the same name. An existential with a simple zero-minimum filler still requires a value; a positive count on the same class and property already guarantees that existence. Boolean class expressions, nested restrictions, inverse properties and property chains remain explicit boxes named after their form, such as Anonymous OWL intersection 1. Types and counts from simple property shapes enrich the UML notation. Identical qualifiers are shown once; where declaring shapes disagree, the disputed type or multiplicity is omitted from the drawing and remains in the dedicated shape documentation. No shape is chosen arbitrarily and conflicting counts are not silently intersected. An absent count imposes no lower or upper bound beyond zero or unbounded, respectively. Complex constraints require the linked full shape definition. Original OWL facts and shape provenance remain in the published source graph. Some diagrams show at most five complete OWL relationship groups within an eighteen-fact budget, selected in deterministic IRI order; omitted groups remain in the published source graph. These views are not exhaustive. Names from the same ontology as the documented class are shown by label; names from another ontology add their prefixed name in parentheses, and unlabelled names show their prefixed name.
